

AWS Course Blockers - Course 1

Date: July 2026

Course reviewed from screenshots: AWS / Amazon Bedrock AgentCore + CrewAI hands-on course

Executive status

Status: BLOCKED for hands-on labs

Impact: HIGH

Reason: AWS account password has expired and requires reset before console/API access can continue.

Observed access error: AWS account 648177073735, user Ameya_Dhake. Password has expired and requires reset by verifying old password and setting a new password.

Main blocker

1. AWS console access unavailable due to expired password.

Impact: High - blocks all AWS hands-on work, deployments, invocations, and UI validation.

Status: Open.

Required action: Account owner/admin must reset or rotate the password and confirm login works.

Do not attempt until access is restored

Vacation Planner CrewAI app build: pre-requisites, implementation, Streamlit UI, and deployment are blocked because they require environment setup and AWS-backed validation.

AgentCore Runtime: pre-requisites, decorator changes, Dockerfile, ECR, and Runtime deployment are blocked because they require AWS console/API, ECR, runtime creation, and IAM permissions.

Invocation flows: AgentCore invocation, Lambda invocation, REST API access, and Streamlit deployment are blocked because they require a deployed runtime endpoint and credentials.

AgentCore Observability: observability setup is blocked because it requires CloudWatch/AgentCore access and configuration.

AgentCore Identity & Gateway: implementation and invocation parts 1-5 are blocked because they require identity, gateway, IAM, and tool/API configuration.

Agent-to-tool/package invocation: travel package invocation via AgentCore Gateway is blocked until Gateway and runtime are working.

AgentCore Memory: adding memory and deployment to runtime are blocked because they require AgentCore Memory resource creation and runtime integration.

Can continue now

Business use case / Financial Vacation Planner overview.

Basic concept videos for AgentCore Runtime, Gateway, Identity, Memory, and Observability.

CrewAI conceptual videos.

Outro or recap videos.

Relevant as of July 2026

Relevant: Amazon Bedrock AgentCore Runtime, Gateway, Identity, Memory, and Observability with CloudWatch/OpenTelemetry.

Relevant: CrewAI agent framework concepts.

Relevant: AWS Lambda, Amazon ECR, Docker, REST API, and Streamlit deployment patterns.

Before restarting labs, verify AWS login, IAM permissions, Bedrock model access, Region support, and budget/cost controls.

Immediate ask for Nilesh / Ameya

1. Reset the expired AWS password for account 648177073735 / user Ameya_Dhake.
2. Confirm successful AWS console login.
3. Confirm required IAM permissions and Region availability.
4. Resume hands-on modules only after the checks pass.
